When purchasing performance upgrades for your car you look for several things such as Performance, Quality, Value, and Customer Service. Forge Motorsport represents all of these and works hard to build upon their existing reputation. All Forge products deliver a level of performance far exceeding the capabilities of their OEM counterparts.

Our valves offer faster throttle response, better boost retention and quicker recovery. All Forge products are made in our state-of-the-art facility in the U.K. All billet products are machined to the strictest tolerances and are subjected to 100% test and inspection.

All our fabricated products are welded by our in-house master craftsmen. Welding is a passion of Forge Motorsport and its unsurpassed quality in the marketplace is represented with robotic like precision. This means you will not only be getting an intercooler that performs second to none but it will look just as good on your car.

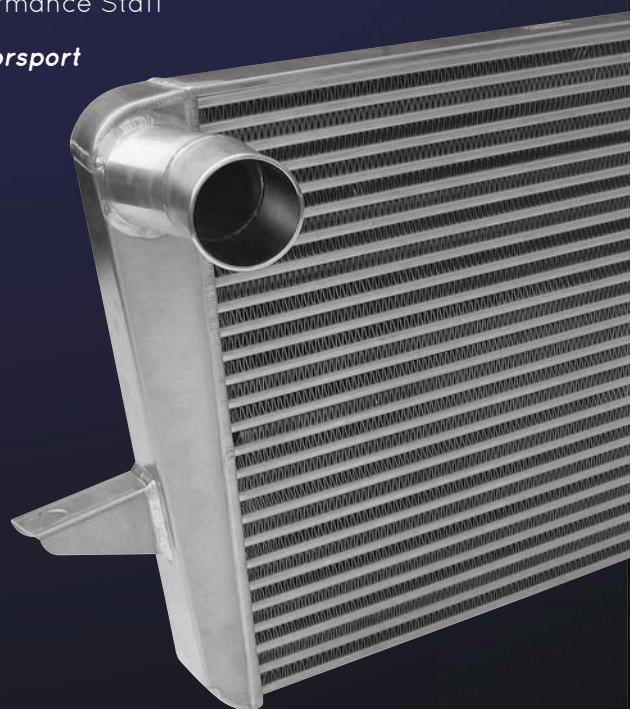

Forge Motorsport strives for customer satisfaction with unparalleled service. We have qualified staff in both England and the USA to assist you either by phone or email. If at any time you have a problem with one of our products we will take care of it with the Forge Motorsport 'No Hassle Guarantee'. This purchase protection is the industry's best.

Ultimately when you combine all of these attributes; performance, quality, value and customer service we feel there is no better choice for your car.

Sincerely

Your Performance Staff

Over the years Forge Motorsport have grown in to one of the UK's premier manufacturers of products and accessories for race, competition and road vehicles.

All Forge production is carried out in-house and controlled by the international standard ISO 9001:2000 for manufacture design and development. With these quality approvals in place Forge continues with its commitment to bring the best products and manufacturing processes to the UK, Europe and North America.

We have continued our expansion with the growth of our sales and distribution facility in Orlando USA and are continually increasing our production and development facilities in the UK to allow us to better serve our growing customer base.

When you purchase from Forge Motorsport you are assured of quality products and a service to match.

If you require a particular product that is not listed in this catalogue or on the web site, please call or e-mail and we will gladly assist with any queries.

Forge Motorsport have spent many years researching and developing their own range of intercoolers.

Engine power output is influenced by the charge air temperature, the higher the charge air temperature is, the less power the engine will produce. So in warm climatic conditions or when the turbo is producing higher boost pressures an original fitment intercooler may limit the engine output. By the installation of a more efficient intercooler, it is possible to cool the charge air temperature further, resulting in more power, or to at least maintain the power that would otherwise be lost.

This can be more noticeable where the engine has been modified which often takes the original fitment intercoolers out of their optimum design criteria.

Forge Intercoolers are designed to improve both the power and efficiency of a turbocharged application by rapidly reducing inherent heat levels of the compressed intake air charge before entering the engine. Pressurised air from the turbo is passed through the core allowing heat to dissipate into the cool ambient air that flows over the cores and fins, this cools the charge air resulting in denser air entering the combustion chamber. Correct matching of core design to the application keeps the overall pressure drop across the system to a minimum whilst achieving a high reduction in the charge air temperature without inducing unwanted turbo lag characteristics. An open core design allows minimum resistance to the air passing through the unit so as not to create significant problems if an oil cooler or radiators are mounted behind. Using high tech welding and cutting edge equipment we produce quality intercoolers at cost effective prices.

We have many sizes available to cover universal and custom applications. All Forge intercoolers are constructed and manufactured according to rigorous quality standards and verified by our in-house test & development facilities.

All production systems operate according to the ISO 9001:2000 standards.

CUSTOM / UNIVERSAL FIT INTERCOOLERS

Forced induction (compression of inlet air) produces heat. Heat can reduce power thus negating some of the benefits of forced induction in the first place.

Incorporating an intercooler between the compressor and the plenum chamber greatly reduces the adverse effects of elevated air inlet temperatures.

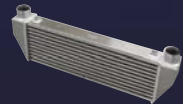

Forge Motorsport's range of universal intercoolers begin with efficient cores sized to fit many forced induction applications. From there, a wide selection of end tank configurations offer numerous installation solutions. Using the highest quality cores, hand fabricated and welded by highly skilled craftsmen, our intercoolers offer excellent thermal properties, flow characteristics, minimal pressure drop and high volumetric efficiency.

This is all at a price considerably lower than one might expect to pay for intercoolers with this level of quality, size and performance. We can also offer custom designed intercoolers manufactured to your specifications and at prices well below what other manufactures charge for 'off the shelf' designs. Contact us for more details.

Forge Motorsport are the largest manufacturer of aftermarket valves in Europe and have been manufacturing and supplying the highest quality blow off valves and diverter valves for many years.

We are proud to supply many OEM dealers and competition race teams around the world.

Forge offer one of the largest selections of aftermarket valves available on the market today. Whether you own a VW, Audi, Mitsubishi or Subaru and you are looking for the exciting, loud, whooshing rally sound or the most efficient type of diverter valve, Forge have a valve for your application. Many of the Forge valves are designed to fit in place of the original factory valves, giving the customer the simplicity of an easy and direct fitment with improved valve performance.

All Forge valves are designed and manufactured in our own CNC engineering facility, and tested on our own development vehicles. Every valve is subjected to 100% inspection and test under the international quality system ISO 9001:2000. When you purchase any Forge valve you are buying the Forge 'no hassle warranty' for life and peace of mind forever.

Forge valves are suitable for most cars with a MAF (mass air flow sensor) and will not cause any engine idling or stalling problems due to the revolutionary and often imitated twin piston, twin spring internal design. The Forge valves are an excellent upgrade to most turbo and supercharger applications.

If you require a valve for an application that is not listed please contact us and we will be pleased to assist you with your request.
